Pillar III disclosures – Year ended 31 December 2014

1. Introduction

1.1 Background

The Provident Financial plc group (the group) comprises three principal trading divisions:

- Vanquis Bank, which provides credit cards to the non-standard UK consumer credit market and accepts retail deposits;
- Consumer Credit Division (CCD), which provides home credit and online lending to the non-standard UK consumer credit market; and
- Moneybarn, which is the UK's largest non-standard vehicle finance provider and was acquired by the group on 20 August 2014.

Vanquis Bank is authorised by the Prudential Regulation Authority (PRA) and regulated by the PRA and the Financial Conduct Authority (FCA). The PRA sets requirements for Vanquis Bank relating to capital and liquidity adequacy and large exposures.

The group, incorporating Vanquis Bank, CCD and Moneybarn, is the subject of consolidated supervision by the PRA by virtue of Provident Financial plc being the parent company of Vanquis Bank. The PRA sets requirements for the consolidated group in respect of capital adequacy and large exposures but not currently in respect of liquidity. The group will be subject to the new PRA liquidity provisions which come into force on 1 October 2015.

CCD and Moneybarn previously operated under a number of consumer credit licences granted by the Office of Fair Trading (OFT). With effect from 1 April 2014, the FCA assumed control of consumer credit regulation from the OFT. The group is well underway in implementing the transition plan in order to submit the application for full FCA authorisation of CCD and Moneybarn in the first half of 2015.

1.2 BASEL requirements

The BASEL regulatory framework has been implemented in the European Union via the Capital Requirements Directive (CRD). The latest iteration of CRD, CRD IV, was implemented and adopted by the group from 1 January 2014. The CRD comprises three Pillars:

- Pillar I is the calculation of minimum regulatory capital requirements which firms are required to hold against risk, the most significant elements for the group being credit risk and operational risk.
- Pillar II aims to enhance the link between an institution's risk profile, its risk management and risk mitigation systems, and its capital planning. For the group, Pillar II requires an Internal Capital Adequacy Assessment Process (ICAAP) to assess whether additional regulatory capital over and above Pillar I should be held based on the risks faced by a firm and the risk management processes in place. For the PRA, Pillar II constitutes a supervisory review and evaluation process (SREP) to ensure that institutions have adequate arrangements, strategies, processes and mechanisms and capital and liquidity to ensure sound management and coverage of their risks.
- Pillar III complements Pillars I and II and aims to encourage market discipline by developing a set of disclosure requirements which allow market participants to assess key pieces of information on a firm's capital, risk exposures, risk management processes, leverage and remuneration.

1.3 Pillar III disclosure policy

The group's approved Pillar III disclosure policy is as follows:

Frequency of disclosures

Pillar III disclosures will be made on an annual basis using the group's year end date of 31 December. The disclosures will be published in line with the publication of the group's annual report and financial statements. More frequent disclosures will be made if there is a material change in the nature of the group's risk profile during any particular year.

Media and location of Pillar III disclosures

These Pillar III disclosures will be published on the group's corporate website www.providentfinancial.com.

There are a number of required Pillar III disclosures which are set out separately in the group's annual report and financial statements. Such disclosures are referenced as appropriate in this document.

Under CRD IV, the group is required to prepare remuneration code Pillar III disclosures. These disclosures are the subject of a separate and stand-alone document and are published on the group's website, <u>www.providentfinancial.com</u>, on an annual basis.

1.4 Basis of Pillar III disclosures

The Pillar III disclosures have been prepared for the group as a whole in accordance with the rules laid out in article 13 of the Capital Requirements Regulation (CRR). The results of Provident Financial plc and all subsidiary undertakings have been included in the Pillar III disclosures and there are no differences between the basis of consolidation for accounting and prudential purposes.

Article 432 of the CRR states that institutions may omit one or more of the Pillar III disclosures if the information is not regarded as material. Information in disclosures shall be regarded as not material if the group does not expect that its omission or misstatement would change or influence the assessment or decision of a user relying on that information for the purpose of making economic decisions. Any disclosures omitted on the grounds of materiality have been identified as such in the body of the document.

Vanquis Bank's requirement to maintain regulatory capital and liquid resources above a level determined by the PRA could restrict the ability and size of dividend payments by Vanquis Bank to Provident Financial plc and the ability to repay amounts under a loan facility from Provident Financial plc to Vanquis Bank. Furthermore, Vanquis Bank is not permitted, and therefore does not lend, any funds to any other group company. There are no other current or foreseen material, practical or legal impediments to the prompt transfer of capital resources or repayments of liabilities between Provident Financial plc and its subsidiary undertakings.

The group has no encumbered assets, no securitised assets, and no exposures to equities and as such no further disclosure is included.

The Pillar III disclosures were approved for publication by Provident Financial plc and Vanquis Bank in March 2015.

2. <u>Risk</u>

A comprehensive overview of the group's risk management objectives, policies, and governance arrangements are set out in the governance section of Provident Financial plc's annual report and financial statements.

Replication of this disclosure has not been included in this document. The group's annual report and financial statements are published on the group's website www.providentfinancial.com.

Pillar III disclosures – Year ended 31 December 2014

3. Own funds and capital ratios

3.1 Composition of own funds

The group's own funds comprise common equity tier 1 (\pounds 330.0m) and a small amount of lower tier 2 capital (\pounds 0.5m). The template in Appendix 1 sets out the composition of the group's regulatory capital resources as at 31 December 2014.

It should be noted that there are no transitional provisions which are applicable to the group which impact the calculation of own funds.

3.2 Reconciliation of audited shareholders' equity to own funds

The group's shareholder's equity is adjusted in order to arrive at a group regulatory capital figure. The adjustments include deduction of the group's pension asset, intangible assets, goodwill and fair value movements of derivative financial instruments, all net of deferred tax. In addition, any profits not audited or verified by the external auditors at the balance sheet date are deducted from retained earnings and a foreseeable dividend is accrued on any audited or verified profits based on the group's dividend policy.

The group's retained earnings and other reserves included in the 2014 audited financial statements have been reconciled to the group's regulatory capital below:

	Note	£m	2014 £m
Shareholders' equity per the financial statements:			
Called-up share capital		30.3	
Share premium account		268.3	
Retained earnings and other reserves		314.4	
			613.0
Adjustments to retained earnings and other reserves:			
Deduction of unaudited and unverified profits at 31 December 2014	1	(59.0)	
Deduction of foreseeable dividends on verified profits	2	(41.3)	
			(100.3)
Common equity tier 1 adjustments:			
Pension asset (net of deferred tax)	3	(44.8)	
Fair value of derivative financial instruments (net of deferred	4	3.4	
tax)	4	5.4	
Goodwill	5	(71.2)	
Intangible assets (net of deferred tax)	6	(70.1)	
Deferred tax assets	7	-	
		_	(182.7)
Total common equity tier 1 capital after deductions			330.0
Tier 2 capital:			
Lower tier 2 capital - Subordinated loan notes	8		0.5
Total regulatory capital		-	330.5
		_	000.0

Notes:

- 1. Any profits not audited or verified by the external auditors at the balance sheet date are deducted from own funds. These profits relate to the period from 30 September 2014 to 31 December 2014.
- 2. Under CRD IV, the group is required to deduct accrued dividends from own funds when they are 'foreseeable' rather than when they are declared. Foreseeable is determined to be in line with the group's current dividend policy of dividend cover of approximately 1.3 times. The foreseeable dividend relates to the profits accrued between 30 June 2014 and 30 September 2014.
- 3. The pension asset, net of deferred tax, is required to be deducted from own funds in order to calculate common equity tier 1.
- 4. The fair value of derivative financial instruments, net of deferred tax, shall not be included in any element of own funds and as such are deducted from common equity tier 1.
- 5. Goodwill reflects the surplus of consideration over identifiable assets acquired and identifiable intangible assets following the acquisition of Moneybarn on 20 August 2014. This is required to be deducted from common equity tier 1.
- 6. Intangible assets comprise the fair value of the broker relationships arising on acquisition of Moneybarn on 20 August 2014, and capitalised software and software development costs. These are required to be deducted from common equity tier 1.
- 7. Deferred tax assets that are dependent on future profitability and arise from temporary differences are to be deducted from common equity tier 1 if the total value is in excess of a threshold. The group had no deferred tax assets at 31 December 2014.
- 8. The extent to which tier 2 instruments qualify as tier 2 capital during the final five years of maturity is calculated as an amortisation of the nominal amount based on the number of calendar days until contractual maturity. At 31 December 2014 the subordinated loan notes of £6.0m had 166 days until maturity and as such £0.5m is included in own funds, further detail on the main features of the tier 2 instruments are set out in section 3.3 below.

3.3 Main features of own funds instruments

The group's common equity tier 1 consists of the group's equity share capital and reserves after adjusting for the amounts set out in section 3.2 above. The equity share capital consists of ordinary shares, the main features of the ordinary shares are set out in Appendix 2.

The group's lower tier 2 capital represents subordinated loan notes with a nominal value of £6.0m which are repayable on 15 June 2015 and accrue interest at 5.5594%.

The value of tier 2 instruments included in own funds is £0.5m and will mature on 15 June 2015. Accordingly, the main features have not been included on the basis of materiality.

Pillar III disclosures – Year ended 31 December 2014

4. Capital requirements

4.1 Capital management and controls

The group uses a number of key performance indicators to assess progress against each of its strategic objectives, including both financial and non-financial measures. The maintenance of a secure funding and capital structure is a key group performance indicator.

The group prudently manages regulatory capital to ensure that it is always maintained at a sufficient level in excess of the ICG set by the PRA.

The key controls in achieving this objective are:

- Monitoring the level of regulatory capital against the ICG on a monthly basis as part of the group's management accounts;
- Producing a monthly rolling forecast, projecting regulatory capital and the ICG for the remainder of the current financial year;
- Forecasting regulatory capital for the following five years and comparing to the group's projected ICG over the same period as part of the budget and budget update processes in December and June each year;
- Assessing the impact that strategic projects could have upon regulatory capital;
- Submitting regulatory capital reports to the PRA periodically; and
- Assessing the appropriateness of the ICG as part of the group's ICAAP process (see 4.1.2), including stress and scenario testing, and reporting to the PRA if it is no longer considered to be appropriate.

4.1.2 ICAAP process

In accordance with the regulations, the group is required to conduct an ICAAP on an annual basis or more frequently if there is a material change in the nature, trading status or risk profile of the group. The ICAAP allows the board to assess whether the group's risk management objective is being met.

The key output of the ICAAP is a document which:

- Provides a background to the group including the group structure, strategy, key management and the internal control framework and risk management processes;
- Calculates the minimum capital required under Pillar I of the regulations for the group;
- Identifies the various additional risks facing the group not included in Pillar I and considers the required level of additional capital to be held against those risks (Pillar IIa);
- Considers the level of additional capital to be held in the PRA prescribed capital planning buffer (Pillar IIb);
- Calculates the overall regulatory capital requirement of the group as a result of Pillar I and Pillar II; and
- Performs stress testing on the group's budget projections to ensure that both the group's calculated regulatory capital requirement and the ICG is sufficient even under extreme scenarios.

The ICAAP is embedded into the group's risk management framework. Within the monthly management accounts, the group's and Vanquis Bank's regulatory capital resources are compared to the existing ICG. Management accounts are distributed to the executive directors and senior members of the management team on a monthly basis and are distributed to the board for each board meeting.

The most material elements of the internal assessment of capital requirements which are summarised in the ICAAP are revisited periodically through the year.

Risk registers are revised and reviewed on a quarterly basis by the group and divisional risk committees. Any material movement in any of the key risks would be highlighted in this review and would trigger a revision of the internal assessment of capital requirements and, if appropriate, the ICAAP.

The ICAAP process, including the modelling and methodology, is periodically subject to review by the group internal audit function and external advisors.

4.2 Pillar I minimum capital requirements

In calculating the Pillar I minimum capital requirements, the group has adopted the standardised approach to credit risk and the alternative standardised approach (ASA) to operational risk.

An analysis of the Pillar I minimum capital requirements and risk weighted exposures as at 31 December 2014 is as follows:

	Ref	2014 Pillar I minimum	2014 Risk weighted exposure
		£m	£m
Credit risk	4.3	121.9	1,523.6
Operational risk	4.4	10.0	125.0
Other risks		-	0.7
Pillar I minimum capital requirement as at 31 December	_	131.9	1,649.3

The following risks are included in the Pillar I requirements calculation but the value of the requirement rounds to zero: counterparty credit risk; credit valuation adjustment risk; and market risk.

Counterparty credit risk - The group measures exposure value on counterparty credit exposures under the counterparty credit risk (CCR) mark-to-market method as permitted under CRD IV. This exposure value is derived by adding the gross positive fair value of the contract (replacement cost) to the contract's potential credit exposure, which is derived by applying a multiple based on the contract's residual maturity to the notional value of the contract. The group uses derivative financial instruments to hedge the interest rate risk and foreign exchange rate risk on its borrowings and overseas profits. The group does not enter into speculative transactions or positions.

Credit valuation adjustment (CVA) risk - CVA represents the market value of counterparty credit risk and is calculated for all group derivatives. The group uses derivative financial instruments to hedge the interest rate risk and foreign exchange rate risk on its borrowings and overseas profits. The group does not enter into speculative transactions or positions.

Market risk - The risk of loss due to adverse market movements caused by active trading positions taken in interest rates, foreign exchange markets, bonds and equities. The group has operations in both the Republic of Ireland and Poland and therefore has an element of foreign currency market risk. The group's corporate policies do not permit it to undertake position taking or trading books of this type and therefore it does not do so.

These risks are not material and therefore no further analysis or discussion has been disclosed.

The group is required to include information on their exposure to interest rate risk and as such this information is set out in section 4.5.

4.3 Credit risk

An analysis of the Pillar I minimum capital requirements and risk weighted exposures as at 31 December 2014 is as follows:

	2014 Pillar I minimum	2014 Risk weighted exposure
	£m	£m
Retail exposures – not past due	98.7	1,233.7
Retail exposures – past due	18.5	231.2
Exposures to corporates	2.0	24.9
Exposures to institutions with a short term credit assessment	0.5	6.3
Other exposures	2.2	27.5
Total credit risk	121.9	1,523.6

The retail exposures constitute the group customer receivables and further disclosure on the retail exposures is set out in 4.3.1 to 4.3.4 below.

External credit assessment institutions (ECAIs) are used to calculate the Pillar I minimum capital requirements for exposures to institutions. The group relies principally on two ECAIs - Moody's and Fitch Ratings.

The exposures to corporate, institutions and other exposures are not deemed material for further disclosure.

4.3.1 Method for determining specific credit risk adjustments - accounting policy for customer receivables

Customer receivables are initially recorded at the amount advanced to the customer plus directly attributable issue costs. Subsequently, receivables are increased by revenue and reduced by cash collections and any deduction for impairment.

The group assesses whether there is objective evidence that customer receivables are impaired on an ongoing basis. The principal criteria for determining whether there is objective evidence of impairment is delinquency in contractual payments.

Within Vanquis Bank and Moneybarn, where repayments are typically made monthly, customer balances are deemed to be impaired when one monthly contractual payment is missed. Impairment is calculated as the difference between the carrying value of receivables and the present value of estimated future cash flows discounted at the original effective interest rate. Estimated future cash flows are based on the historical performance of customer balances falling into different arrears stages and are regularly reassessed.

Separate provisions are raised where forbearance is provided to the customer and alternative payment arrangements are established. Accounts under payment arrangements are separately identified according to the type of payment arrangement. The carrying value of receivables under each type of payment arrangement is calculated using historical cash flows to predict future expected cash flows which are discounted at the original effective interest rate.

Within the weekly home credit business of CCD, objective evidence of impairment is based on the payment performance of loans in the previous 12 weeks as this is considered to be the most appropriate indicator of credit quality. Loans are deemed to be impaired when the cumulative amount of two or more contractual weekly payments have been missed in the previous 12-week period since only at this point do the expected future cash flows from loans deteriorate significantly. Loans with one missed weekly payment over the previous 12-week period are not deemed to be impaired. The amount of impairment loss is calculated on a portfolio basis by reference to arrears stages and is measured as the difference between the carrying value of the loans and the present value of estimated future cash flows discounted at the original effective interest rate. Subsequent cash flows are regularly compared to estimated cash flows to ensure that the estimates are sufficiently accurate for impairment provisioning purposes.

In Vanquis Bank and Moneybarn impairment is recorded through the use of an allowance account whilst in CCD impairment charges are deducted directly from the carrying value of receivables.

Impairment is charged to the income statement as part of operating costs.

4.3.2 Analysis of credit risk exposures

The group's maximum exposure to credit risk on customer receivables is the carrying value of customer receivables recorded in the group's balance sheet.

All customer receivables are classed as retail exposures. Vanquis Bank exposures are revolving retail exposures.

Exposures analysed by business division are as follows:

	2014
	£m
Vanquis Bank	1,109.4
CCD	588.1
Moneybarn	151.7
Total	1,849.2

The average exposure in the year ended 31 December 2014 was £1,623.9m.

Exposures analysed by geographical area are as follows:

Exposures analysed by geographical area are as follows.	<u>2014</u> £m
UK Republic of Ireland Poland	1,779.8 53.9 15.5
Total	1,849.2

Republic of Ireland exposures relate to loans issued by the home credit business and Polish exposures relate to the Vanquis Bank pilot credit card operation. In early 2015, a decision was made to withdraw from the pilot credit card operation in Poland. This reflects a conclusion that the timeframe required to develop a business of sufficient scale to achieve the group's target returns is too long and therefore not the best use of the group's capital.

The following table shows the residual maturity of exposures by business on a contractual basis:

	2014		
	Due within one	Due in more than	
	year	one year	Total
	£m	£m	£m
Vanquis Bank	1,109.4	-	1,109.4
CCD	532.8	55.3	588.1
Moneybarn	51.4	100.3	151.7
Total	1,693.6	155.6	1,849.2

4.3.3 Credit quality of customer receivables

Within Vanquis Bank and Moneybarn, customer balances are deemed to be impaired as soon as customers miss one contractual monthly payment. Therefore, within Vanquis Bank and Moneybarn, there are no accounts/balances which are past due but not impaired.

In the home credit business, past due but not impaired balances relate to loans which are contractually overdue. However, contractually overdue loans are not deemed to be impaired unless the customer has missed two or more cumulative weekly payments in the previous 12-week period, since only at this point do the expected future cash flows from loans deteriorate significantly.

The credit quality of customer receivables is as follows:

	<u>2014</u> £m
Neither past due nor impaired Past due but not impaired Impaired	1,399.6 64.6 385.0
Total	1,849.2

The credit quality of customer receivables analysed by business division is as follows:

	2014			
	Vanquis			
	Bank	CCD	Moneybarn	Total
	£m	£m	£m	£m
Neither past due nor impaired	1,022	258.4	119.2	1,399.6
Past due but not impaired	-	64.6	-	64.6
Impaired	87.4	265.1	32.5	385.0
Total	1,109.4	588.1	151.7	1,849.2

The credit quality of customer receivables analysed by geographical area is as follows:

		2014		
	UK	UK ROI Poland Tota		
	£m	£m	£m	£m
Neither past due nor impaired	1,355.6	30.2	13.8	1,399.6
Past due but not impaired	59.9	4.7	-	64.6
Impaired	364.3	19.0	1.7	385.0
Total	1,779.8	53.9	15.5	1,849.2

4.3.4 Movement in impairment provisions

The impairment charge to the income statement in respect of customer receivables analysed by business division is as follows:

	2014
	£m
Vanquis Bank	149.1
CCD	177.5
Moneybarn	1.2
Moneybarn	1.2
Total	327.8

The movement in the impairment allowance account within Vanquis Bank in the year is as follows:

	2014
	£m
At 1 January	128.8
Charge for the year	149.1
Amounts written off during the year	(123.3)
Amounts recovered during the year	24.0
At 31 December	178.6

The movement in the impairment allowance account within Moneybarn in the period since acquisition is as follows:

	<u>2014</u> £m
On acquisition Charge for the period Amounts written off during the period Amounts recovered during the period	27.0 1.2 (1.1)
At 31 December	27.1

For CCD, impairment charges are deducted directly from the carrying value of receivables without the use of an impairment allowance account. Accordingly, it is not possible to disclose movements in an impairment allowance account for CCD.

4.4 Operational risk

Consistent with the approach adopted in previous years, the group has elected to use the ASA for measuring operational risk. The ASA is an approach which is tailored specifically to firms whose primary business lines involve retail banking and/or commercial banking and can only be adopted provided certain criteria are met. Management are satisfied that they can adopt the ASA in accordance with CRR article 319 and 320 as follows:

- The group has a well-documented assessment and management system for operational risk with clear responsibilities assigned for this system. In addition, the group is able to identify exposures to operational risk, has systems of reporting operational risk matters to senior management and has procedures in place for taking appropriate action. These systems of control are comprehensive and proportionate to the nature, scale and complexity of the firm's activities;
- The operations of the group are wholly focused in retail banking, 100% of all revenue activities are derived from this activity;
- The group issues credit to non-standard customers and there is a higher probability of default; and
- Management has concluded that the ASA provides an appropriate basis for calculating the own funds requirement for operational risk.

4.5 Interest rate risk

Interest rate risk is the risk of a change in external interest rates which leads to an increase in the group's cost of borrowing.

The group's exposure to movements in interest rates is continually monitored and is formally reported to the group treasury committee under a board-approved interest rate hedging policy on a quarterly basis or more frequently as deemed appropriate.

The group measures its interest rate exposure by quantifying the impact of an immediate and sustained movement of 200bp in LIBOR rates upon its forecast profit before taxation.

In calculating this exposure, the group assumes that it will re-price products for new lending. It is possible for Vanquis Bank to re-price its receivables within 2 months and for CCD and Moneybarn loans to be issued at re-priced levels within 1 month. Given the short duration of the receivables book, on average the group would be able to re-price its receivables portfolio within 6 months to mitigate the impact upon forecast borrowing costs.

The level of fixed and floating-rate receivables and borrowings beyond the next 6 months are forecast to be matched, resulting in a neutral interest rate position.

The level of downside risk resulting from exposure to interest rates calculated on the basis set out above as at 31 December 2014 is as follows:

	2014
	£m
Sterling Euro	1.5 0.3
Total	1.8

5. Capital buffers

CRD IV establishes a number of capital buffers to be met with common equity tier 1 capital:

Capital conservation buffer - Designed to enable firms to absorb losses in stressed periods and is set at 2.5% of risk weighted assets. The buffer will apply to the group and will be phased in from 1 January 2016 to 1 January 2019.

Countercyclical capital buffer - CRD IV introduces a countercyclical capital buffer to ensure banks build up capital outside periods of stress that can be drawn down when losses are incurred.

The institution-specific buffer rate for the group will be based on the weighted average of the buffer rates that apply in the jurisdictions where relevant credit exposures are located. As set out in section 4.3.2, the group's credit exposures are located in the UK, the Republic of Ireland and Poland. Currently the group's institution-specific countercyclical capital buffer is zero.

Systemic risk buffer (SRB) - In addition to the measures above, CRD IV sets out an SRB with a view to mitigating structural macroprudential risk. The SRB is to be applied to ring fenced banks and building societies over a certain threshold, which are together defined as 'SRB institutions'. The SRB does not apply to either the group or Vanquis Bank.

Globally systemically important institutions (G-SII) and other systemically important institutions (O-SII) buffers - Additional buffers are required for institutions defined as globally systemic or of other systemic importance. The G-SII and O-SII buffers do not apply to either the group or Vanquis Bank.

Pillar II and the PRA buffer - Under the Pillar II framework, banks are already required to hold capital in respect of the internal capital adequacy assessment and supervisory review which leads to a final determination by the PRA of individual capital guidance.

As part of the CRD IV implementation, the PRA have proposed to introduce a PRA buffer, to replace the existing capital planning buffer. It is proposed that a PRA buffer will avoid duplication with CRD IV buffers (set out above) and will be set for a particular firm depending on its vulnerability in a stress scenario or where the PRA has identified risk management and governance failings. Where the PRA considers there is overlap between the CRD IV buffers and the PRA buffer assessment, the PRA proposes to set the PRA buffer as the excess capital required over and above the CRD IV buffers. The PRA expects to finalise the Pillar II framework in July 2015, with implementation expected from 1 January 2016. Until this consultation is finalised and revised rules and guidance issued, there remains uncertainty as to the exact buffer rate requirements for the group.

6. Leverage and capital ratios

6.1 Leverage ratio

The leverage ratio is a new monitoring tool which aims to facilitate an assessment of the risk of excessive leverage in an institution. The ratio is calculated as tier 1 capital divided by on and off balance sheet exposures in accordance with the provisions set out in CRR article 429.

Work is ongoing by the European Banking Authority (EBA) and by the Financial Policy Committee (FPC) in order to review the design of the leverage ratio framework and to assess the impact of the ratio as a binding measure.

The leverage ratio for the group at 31 December 2014 is as follows:

	2014
	£m
Total assets per the audited financial statements Reversal of accounting value of derivatives Add back market value of derivatives Addition of off balance sheet commitments ¹ Exclusion of items deducted from own funds (see 3.2)	2,258.7 (0.2) 0.9 50.5 (182.7)
Total leverage exposure	2,127.2
Tier 1 capital (see 3.2)	330.0
Leverage ratio	15.5%

1 The exposure of off balance sheet commitments relate to undrawn credit card lines in Vanquis Bank.

There are no transitional provisions which are applicable to the group which impact the calculation of the leverage ratio.

Excessive leverage is managed through the group's secure funding and capital structure. The group has a stated maximum gearing ratio (calculated in accordance with the group's banking covenants) of 3.5 times which is aligned with the group's growth targets and dividend payout policy.

Pillar III disclosures – Year ended 31 December 2014

6.2 Capital ratios

The common equity tier 1 and total capital ratios for the group are as follows:

	2014 £m
Common equity tier 1 capital (see 3.2)	330.0
Tier 2 capital (see 3.2)	0.5
Total capital	330.5
Risk exposure amount (see 4.2)	1,649.3
Common equity tier 1 capital ratio	20.0%
Total capital ratio	20.0%

The group has no additional tier 1 capital and as such there is no difference between the common equity tier 1 capital ratio and the tier 1 capital ratio.

There are no transitional provisions which are applicable to the group which impact the calculation of the capital ratios.

APPENDIX 1 – Own funds template

Comm	on Equity Tier 1 Capital: Instruments and reserves	Amount at Disclosure Date £m
1	Capital instruments and the related share premium accounts	298.6
	of which: Ordinary share capital	298.6
2	Retained earnings	145.7
3	Accumulated other comprehensive income (and other reserves, to include unrealised	42.0
	gains and losses under the applicable accounting standards)	
3a	Funds for general banking risk	-
4	Amount of qualifying items referred to in Article 484 (3) and the related share premium	-
	accounts subject to phase out from CET1	
	Public sector capital injections grandfathered until 1 January 2018	-
5	Minority interests (amount allowed in consolidated CET1)	-
5a	Independently reviewed interim profits net of any foreseeable charge or dividend	26.4
6	Common Equity Tier 1 (CET1) capital before regulatory adjustments	512.7
